

## Pre-Weathered Cladding

When timber cladding has been installed without a coating system it will naturally age and weather giving different shades of grey timber and unsightly, water ingress tide marks which are not perceived by all homeowners in the same way.

We currently offer a weathered look for new timber cladding, which also protects in two options.

Option 1: We only need to factory apply one coat of a water-borne coating to all sides to achieve protection against moisture ingress, giving the timber cladding an instant natural weathered grey ambience. Over time this option will gradually erode leaving naturally weathered cladding.

Option 2: A two coat option can obtain an increase in durability and be maintained if and when required.

Note: Timbers that do not meet durability Class 3, EN 350:2016 will require a preservative prior to coating.

### Properties:

- Harmonious transition to natural greying (Option 1)
- Reduces the swelling and shrinking of the substrate
- Provides excellent moisture protection
- No primer necessary
- Very good penetration

### Timber species, wooden facades made from:

- Western Red Cedar (Option 2 only)
- Accoya
- Radiata Pine Thermowood
- Redwood Thermowood
- Douglas Fir
- Larch

### Surface Finishes:

- Planed
- Re-sawn
- Structured

### Colours / Shades:

Our Pre-Weathered timber is available as a one or two coat system and is dependant on the desired aesthetic and durability requirements. The colour swatches below are a mixture of one and two coat options that have been applied under factory controlled conditions. The swatches should be used as a guide and hand samples will be provided for customer sign-off before an order is processed.
